eOrganizer

eOrganizer is an industry-independent task management system. The application has been created for different industries suitable variations. Industries include social and health care , the environment, cleaning and real estate, media, ICT, education, construction and maintenance, sports and associations, as well as for conferences and large-scale event management . The measures taken in the working areas documentation of the meaning of eOrganizer tool, the employee can save the task or job to the time spent , actions taken and any additional information. Data is entered using the Internet -connected device. Then data is transferred directly to the server where the system administrator can compile reports on various positions as well as the cost and time spent . By using application you can connect each task internet link, image, attachment, text, stakeholders, suppliers, the resources required, the contract price or an hourly rate.

You can apply a number of criteria made the tasks and scheduled tasks in the future

Intelligent search criteria (in terms of status and type, reference, task, title, location, time period, priority, resource, group, editor) employee, job planner, coordinator or team leader will find an employee, group, sub-contractors , etc to their roles and the status quo .

Customers can order the services with eOrganizer software

When a customer orders a service by using eOrganizer he can see how work is progressing (registered, pending , completed , etc.). The service provider can see how the resources or sub-contractors will get the job done.

Recognition of the tasks to take advantage of the customer, subcontractors and partners

Information log on directly to the server. An internet link can be connected to an external Internet application that is associated with the task (for example, Internet -based negotiation system,   a Web conference system). The photo can be added to software. Picture is a good evidence before and after repair.

A number of advantages - the tool for worker , the coordinator of the group or work team leader

By using eOrganizer software work time and costs for the work areas and jobs can efficiently be charged from the customer. User can find a free human resource and a network of resources, which can allocate tasks to the team. By using software you need an Internet connection and web browser equipped smartphone, computer or tablet. The system administrator is able to manage the content of the system, for example, resources , suppliers , places, or activities by adding them. The administrator can define itself of its activities related to the specific characteristics and organizational changes in the software. Different elements can be modified according to circumstances, status, priorities etc.
